

Dear Hiring Team,

I recently came across the Graduate Engineer position in your industrial vibration team and wanted to reach out directly. While my background is in electronic engineering rather than mechanical, my hands-on experience revolves heavily around what your team does best: data acquisition, dynamic systems, and turning complex physical phenomena into actionable data using tools like Python and MATLAB. Back in Argentina, I coordinated technical projects involving custom sensor integration and real-time data processing, which taught me how to diagnose hardware issues and approach structural or mechanical challenges from an analytical standpoint.

What genuinely draws me to Vipac is the fieldwork and the variety of the projects. I am someone who prefers being hands-on, whether that means setting up data acquisition hardware in the field, writing scripts to analyze signals, or collaborating with a multidisciplinary team. Having recently relocated to Australia on a Working Holiday Visa, I am fully adaptable, eager to travel for on-site work, and genuinely excited about the prospect of cutting my teeth in industrial vibration and machine reliability alongside your consultants.

I would love the opportunity to chat about how my background in embedded systems, programming, and hardware-software integration could bring a fresh perspective to your group in Brisbane. Thank you for your time and consideration.

Sincerely,

Javier Nicolas Nieto
