

Dear Mike McNulty,

I am writing to express my interest in the Technical Support / AI Engineer role. Having recently relocated to Melbourne from Argentina on a Working Holiday Visa, I am eager to bring my background in electronic engineering and software development to a dynamic team where I can solve practical problems and help users get the most out of advanced technology.

My experience spans both the hardware and software sides of tech. In my previous role as a Technical Team Coordinator, I led the development of an AI-driven humanoid robot, which taught me how to troubleshoot complex, interconnected systems under pressure. This, combined with my backend developer experience using Python and Django, has given me a solid foundation in diagnosing system bugs, working with APIs, and maintaining database integrity. I truly enjoy the puzzle of finding root causes, whether that means diving into system logs, analyzing code, or communicating technical solutions clearly and empathetically to stakeholders.

I love learning new tools and adapt quickly to fast-paced environments. I am fully set up in Melbourne, ready to start, and would welcome the opportunity to discuss how my analytical mindset and hands-on AI experience can support your daily operations and growth.

Sincerely,

Javier Nicolas Nieto
